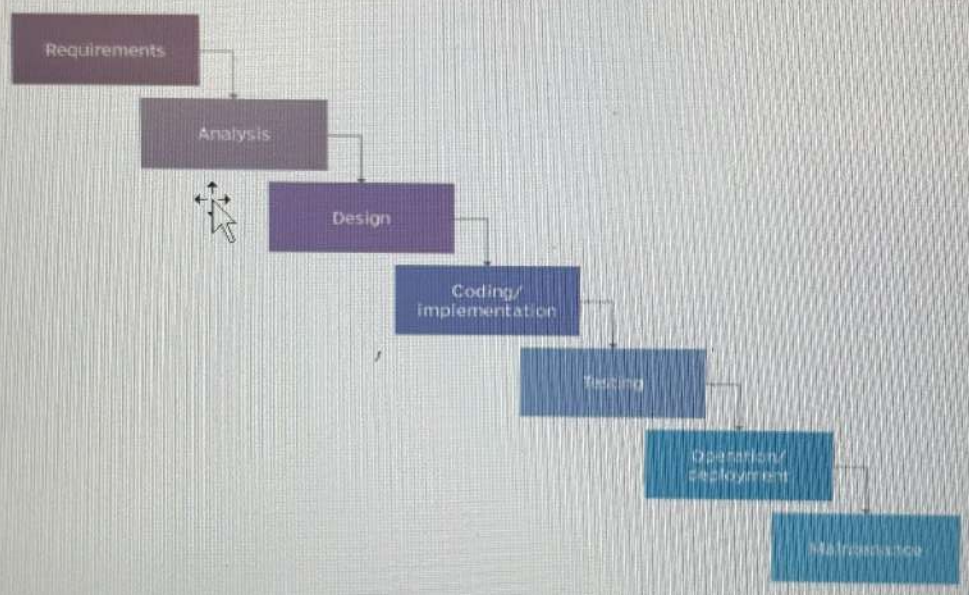
Day-03

Ankita Ganesh

Activity-01

Waterfall model



Comparison Between Waterfall and Agile

1. Approach

Waterfall: Follows a step-by-step, fixed sequence.

Agile: Follows an iterative and flexible process.

2. Requirement Changes

Activity-02

Agile Manifesto

The Agile Manifesto is a set of values and principles created to guide teams in building software in a flexible and collaborative way. It focuses on working closely with customers, adapting to changes quickly, and delivering small parts of the product continuously rather than all at once.

The four main values of the Agile Manifesto

1. Individuals and interactions over processes and tools:
   People working together is more important than strict processes.
2. Working software over comprehensive documentation:
   The main goal is to deliver a working product rather than spending too much time on paperwork.
3. Customer collaboration over contract negotiation:
   Teams work with customers regularly instead of only at the beginning.
4. Responding to change over following a plan:
   Changes are expected and welcomed instead of avoided.

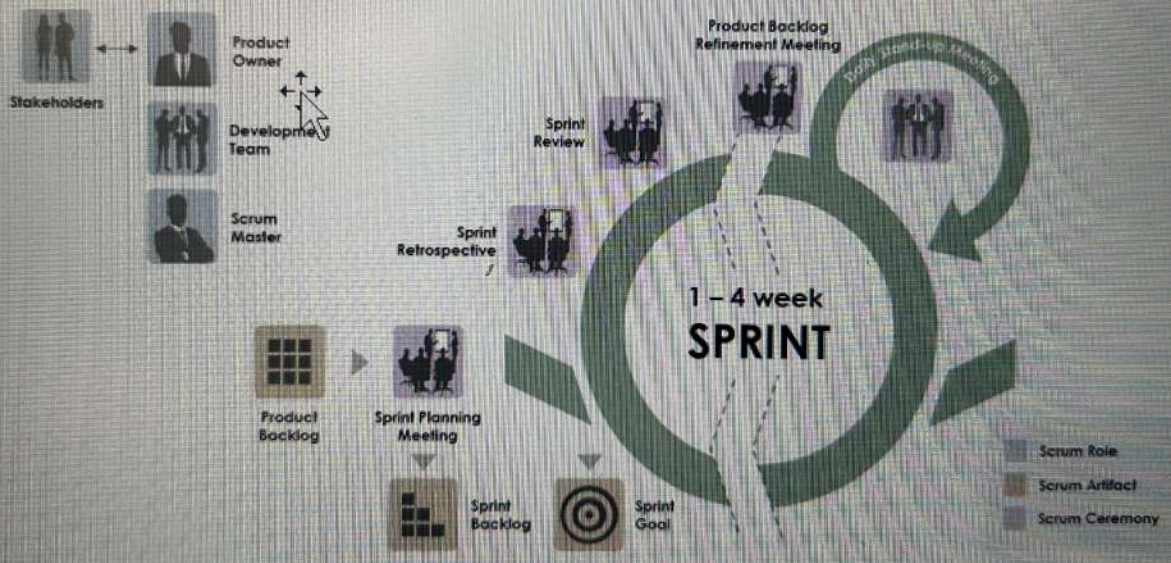
Different Agile Frameworks

Agile can be followed through many frameworks. Some commonly used ones are:

- Scrum

Scrum

Scrum is one of the most widely used Agile frameworks. Work is divided into short cycles called sprints, usually lasting one to four weeks. The idea is to complete a small, usable part of the product in each sprint. Scrum also has defined roles: the Product Owner, the Scrum Master, and the Development Team.



How Scrum works:

1. The team plans what they will work on for the upcoming sprint.

Activity-03

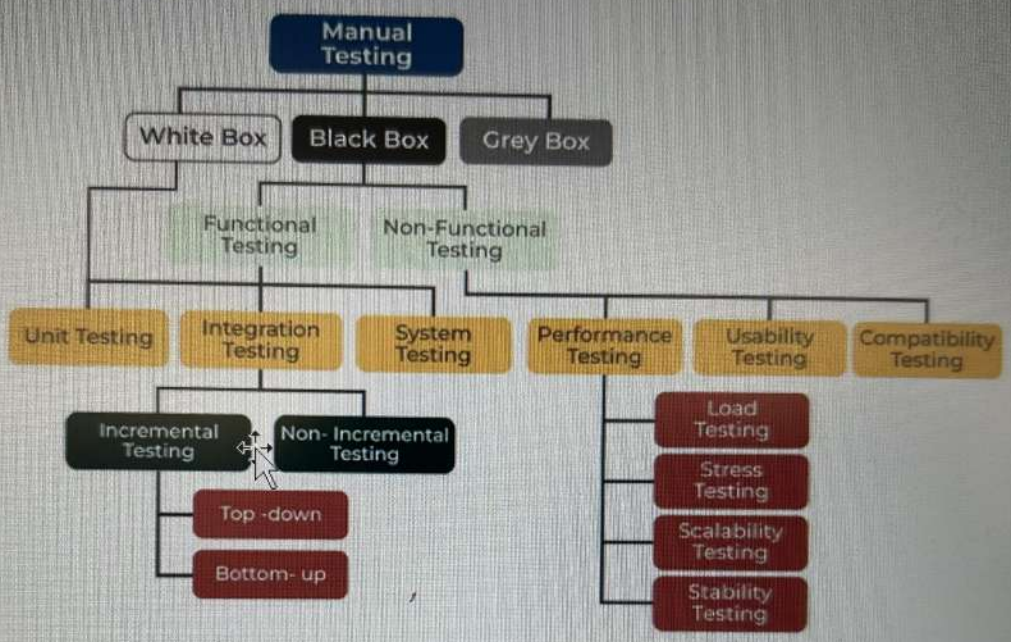
Tools Used in Scrum/Agile Process

Scrum teams use tools that help with planning, tracking work, and communicating. Some commonly used tools are:

1. **Jira**
   Used for creating user stories, managing sprints, tracking progress, and reporting.
2. **Trello**
   A visual board used to track tasks in To Do, In Progress, and Done.
3. **Azure DevOps**
   Supports backlog management, sprint planning, automated builds, and testing.
4. **Confluence**
   Used to document requirements, notes, sprint details, and project information.
5. **Miro**
   Used for sprint planning, retrospectives, brainstorming, and collaborative diagrams.
6. **Slack or Microsoft Teams**
   Used for daily communication and quick discussions within the team.

AI Tool Used in the Agile Process

Activity-04



White Box Testing –

White box testing means checking the internal code

Example: Medical chatbot.

The developer opens the chatbot's code and checks the logic that decides:

- If the user types "fever + body pain," the bot should suggest "possible flu."
- If the fever is above 102F, the bot should recommend "seek medical help."

Activity-05

Test Case Design Techniques –

	A	B	C	D	E	F	G	H	I
1	TC identifi	Test conditions/Test Scenario	Test data/Input values	Pre-condition	Test Description	test case	Expected result	post condition	Test Design Technique
2	ATM01	login to ATM with valid card and pin	active ATM card+correc	ATM machine is powered on, card should be valid	verify that the user can successfully log into the ATM using valid credentials	1.Insert ATM card into the machine 2.Select preferred language 3.Enter valid PIN 4.Press confirm 5.wait for authentication	user is authenticated and ATM main menu is displayed	user session becomes active	Equivalence Partioning
3	ATM02	withdrawal attempt with incorrect PIN	Valid card, incorrect PIN	ATM on, card active	Verify ATM rejects invalid PIN	Insert card → Enter wrong PIN → Confirm	Error message and retry option	PIN attempt counter updated	EP(Invalid PIN)
4	ATM03	Withdrawal with insufficient balance	withdrawal amount greater than available account balance	ATM machine is powered on, card should be valid	Verify ATM prevents withdrawal when funds are insufficient	1.Insert ATM card into the machine 2.Select preferred language 3.Enter valid PIN 4.Select cash withdrawal option 5.choose account type 7.confirm transaction 8.wait for processing	ATM displays insufficient balance message and cancels transaction	No money deducted , session remains active	EP (Invalid balance)
5	ATM04	Minimum boundary withdrawal	Amount = 100	ATM machine is powered on, user logged in	Verify ATM allows min limit	1.Insert ATM 3.Enter valid PIN 4.select pin change 5.Withdrawal 6.Enter 100 7.Confirm	Cash is dispensed	Balance updated	BVA (Minimum boundary)
6	ATM05		successful when all conditions are s	Valid card + valid Pin-Al	ATM powered on; user inserts a valid card	Verify withdrawal is successful when all decision table conditions are satisfied	Insert ATM card into the machine 1.Select preferred language 2.Enter valid PIN 3.Select any transaction (e.g., withdrawal or balance inquiry) 4.Enter Valid amount 5.confirmation	Cash is dispensed and receipt printed	Balance updated, session remains active	Decision Table Testing
